Regeneron Pharmaceuticals

Ph.D. Intern

Tarrytown, NY
Summer 2021

- Conducted multiphase simulations of bioreactors using ANSYS Fluent.
- Helped identify thresholds for operating bioreactors at low-volume conditions
- Created a framework for reliably conducting in-house CFD simulations of bioreactors

Toyota Material Handling (Raymond Corp.)

Intern Research Engineer

Greene, NY
Summer 2016

- Spearheaded a project for testing the feasibility of switching forklift trucks from legacy lead-acid batteries to Lithium-Ion batteries.
- Designed and conducted preliminary experiments which would allow Raymond to monitor the on-field performance of the hydraulic systems in its lift trucks through telematics software already in use.
- Modeled the mast of a forklift truck under extreme loading conditions using Abaqus, in order to investigate the effect of changing the thickness of hydraulic cylinders.

Cornell Mars Rover Project Team

Task Systems team member

Ithaca, NY
Fall 2013 –Spring 2016

- Work with a team of 40 students from different engineering disciplines, who collaborate to design, build, and remotely operate a fully-functioning mock Mars Rover at an annual competition in Utah.
- Used SolidWorks to design assemblies and prepare shop drawings with tolerances. Fabricated aluminum parts in machine shop using mill and lathe.
- Built a different subsystem each academic year: wrist joint, elbow joint, and end effector (robotic hand).
